

Guessing vs. Knowing

How Districts Can Measure True ROI to Drive Change

Districts invest in numerous educational programs, but without the right tools, it's difficult to measure their true impact. All too often, districts struggle with scattered data, underutilized resources, and unclear insights into what's truly benefiting students—leading to ineffective spending.

THE GUESSING GAME

Disconnected Data:
Schools rely on multiple platforms to track student progress and resource effectiveness, making it difficult to see the bigger picture of what is or isn't working.

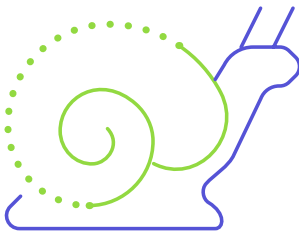

Wasted Resources:
Programs are funded without clear usage or performance data, leading to underutilization of digital and in-person programming.

Instructional Blind Spots:
Teachers and administrators lack real-time insights to uncover what is or isn't working and adjust teaching strategies accordingly.

Slow Decision-Making:
By the time state assessment results arrive, it's too late to make impactful programming changes.

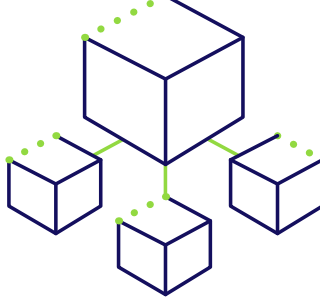

Unmeasured ROI:
Districts invest in tools and programs without knowing their true impact on learning outcomes and miss out on the chance to measure each one.

KNOWING THE FULL STORY

Centralized, Actionable Insights:
A single platform provides real-time data on student performance and resource usage.

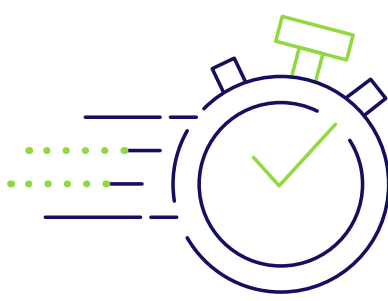

Spending:
Districts eliminate underutilized programs and reallocate funds to high-impact initiatives.

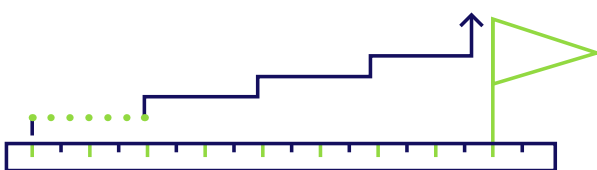

Data-Driven Instruction:
Educators use insights to tailor teaching strategies and ensure curriculum effectiveness across the entire student body.

Faster, Informed Decisions:
Leaders and teachers can adjust instruction immediately, improving student outcomes.

Measured Success:
Districts track the financial and instructional return on every investment, from digital tools to non-digital programming like high dosage tutoring, summer school and professional development, to ensure they're maximizing every dollar's impact.

Ready to Stop Guessing at What's Working?

With a comprehensive Return on Instruction (ROI) platform, you can confidently move from guesswork to data-driven decision making, ensuring every dollar spent contributes to student success. Level Data's ROI solution correlates student achievement, spending, and resource utilization data, to reveal the true return on your investments. **Contact us** to see how.
